

advanced green roof™

sloped

AGR™ Sloped includes a slope stabilization feature. AGR™ is ideal for sloped applications in that it can be pre-grown and integrates subsurface irrigation which has been shown in green roof studies to be needed on sloped green roof systems.

Proper engineering must be done to accommodate slope force weights depending on the length and degree of slope.

not to scale

patent pending technology

Illustrations are to conceptually assist professionals in designing AGR™ installations. AGA™ does not accept responsibility for engineering based on illustrations. A qualified roofing specialist should be consulted to determine appropriate waterproofing and roof deck materials.
